# Section 6 challenge tasks.

1. The EventDetailsHeader.tsx needs a button to "Manage" the event. This should be located to the left of the Join event button and provide a link to the event form.
2. The Event form cancel button should take the user back to the previous location. Hint: navigate(-1) is the "go back" functionality in React router.
3. The Event form should be populated with the details of the event when it is being edited and the blank form when the createEvent link is used to get to the form.
4. When the event is either edited or created then after submission the user should be routed to the updated or created Event details page.

## Optional stretch challenge.

When navigating to the CreateEvent from either the event detailed page or from the edit form view, then the form should be an empty form without needing to refresh.

Hint 1: Research the useRef hook.
Hint 2: The HTMLFormElement has a reset() function.
